The Model is a hypothetical composite created from up to 5 Indexes. Each Index was chosen as a representation of the asset class or market segment within the model. The numbers do not represent an actual account or any actual performance of any investment or group of investments. As a model of Indexes, the results are GROSS of fees to utilize the Index performance results as published by each Index Agency when backtesting for the model. Actual performance will vary depending on many factors including fees, market conditions and the specific investments within the account.
