

ETF InvestmentView

OVER THE LAST WEEK
AS OF AUGUST 23, 2024

Quick Take

The long-term model has improved driven by a significant improvement in market breadth at the industry level and strong 6-12 month momentum within the equity markets.

The RISK component of our model continues to remain favorable towards equities as the VIX is at below average levels and the MOVE index trended lower for the third consecutive week.

The intermediate-term model has moved closer to its average as bullish options activity and investor surveys are negatively affecting the model from a contrarian perspective.

OVERALL MODEL OUTPUT

A Closer Look at Our Tactical Positioning Targets

Some Meeder Portfolio strategies utilize our Defensive Equity Strategy to determine what portion of the portfolio's equity sleeve will be invested in the equity markets. The dynamic statistical model analyzes and ranks over 70 different factors from our short, intermediate, and long term models to estimate the potential reward and marketplace risk of the equity markets. When the model indicates that the risks of the stock market may be greater than its potential rewards, the portfolios can scale back their equity exposure.

DEFENSIVE EQUITY SNAPSHOT

As of August 23, 2024 As of July 26, 2024

DEFENSIVE EQUITY ALLOCATION

UNDERSTANDING THE DEFENSIVE EQUITY SNAPSHOT

The vertical axis of the grid combines the scores of our short, intermediate and long-term models to arrive at the reward value for the stock market. The horizontal axis represents the model's internal measure of stock market risk. The reward value is divided by marketplace risk to arrive at our recommended percentage of Net Equity Exposure. The allocation of each portfolio's equity sleeve will vary depending on the strategy of the portfolio.

MEEDER FIXED INCOME STRATEGY

The Meeder Fixed Income Strategy allocates the fixed income component of portfolios among exchange traded funds focusing on U.S. Government and agency securities, investment-grade bonds, high-yield corporate bonds and international debt. Employing a multi-factor model, the strategy covers both asset class and duration of fixed income funds held by the portfolios.
